ENKA TECNICA

The Extrusioners

Transforming old into new.

Refresh Service for your spinnerets
from Enka Tecnica.

Our innovative method restores used spunbond and meltblown spinnerets.

Refresh without compromising quality and performance.

Spinnerets are subjected to extreme stress and loads. So it is no surprise that they have to be replaced on a regular basis at relatively short intervals. Investment and installation of completely new spinnerets, though, is not always necessary.

At Enka Tecnica, we have developed an innovative method for refreshing spinnerets and getting them right back into the production process. Even new spinnerets that have been damaged can often be refurbished using our method. And all this without compromising quality, with the same excellent performance of a new spinneret.

For your information: Lower your costs by 70% by opting for a refresh instead of purchasing new spinnerets.

Individual refurbishment options

Enka Tecnica turns used spinnerets into high-performance spinnerets that are suitable for intensive and continuous daily operation. Our Refresh Service not only refurbishes spinnerets manufactured by Enka Tecnica but also spinnerets from all manufacturers.

If you are uncertain whether a used spinneret can be restored to working condition, you can send the spinneret directly to Enka Tecnica and we will evaluate its condition. Alternatively, we will come to your company to evaluate its condition and determine refurbishment options.

Talk to us – we will be happy to advise you.

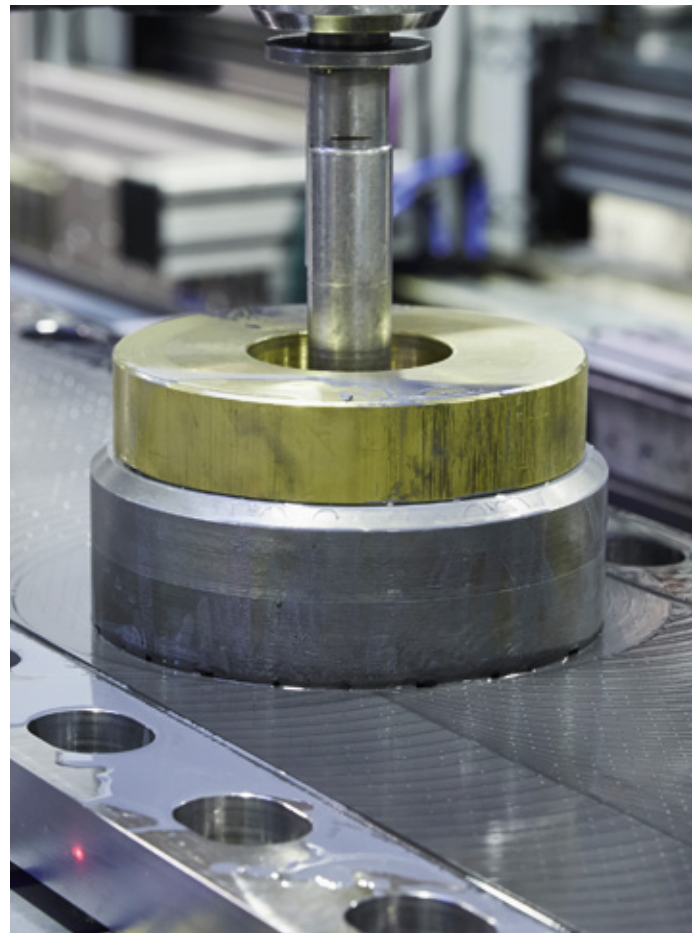

Example of a meltblown spinneret in before/after comparison

Refresh – the efficient alternative.

Refresh or purchase new?
In addition to cost savings, you also gain a whole range of benefits by refreshing your used spinnerets. Compare for yourself.

	Refresh	Purchase new
Cost Savings	+	-
Availability	+	-
Uniform surface weight	=	=
Long cycle life	=	=

Enka Tecnica Refresh Services gives used spinnerets a second life – without compromising quality and performance.

How the Refresh Service works.

- 1 The spinnerets are delivered to Enka Tecnica
- 2 The condition of the spinnerets is evaluated*
- 3 The cost estimate is based on the repairs required*
- 4 Enka Tecnica Refresh Method
- 5 Final inspection based on the same strict criteria used for the final quality control of new spinnerets
- 6 After successful quality control, the spinnerets are stamped and sealed "Refreshed by ET"
- 7 The refurbished spinnerets are shipped back to the customer

*At no additional expense for the customer
